

Current Site Analysis & Findings

Key Problems

What I found: The site has solid bones — a good booking flow on [/airporttransfer](#), a rich tour catalog on [/charter-1](#), and well-written legal documents — but it suffers from structural problems that hurt both usability and trust.

The four most critical things to fix:

1. **Split /services into 4 dedicated pages.** Right now Airport Transfer, Sightseeing, Point-to-Point, and Custom Tours are all stacked on one endless page. Each service deserves its own URL with a direct Book CTA.
2. **Merge /about and /profile.** These two pages heavily overlap. The fix is simple: [/about](#) becomes brand story + values + EV roadmap, and [/about/company](#) (renamed from /profile) becomes the legal entity details and CEO message.
3. **Fix the navigation.** Currently 7+ pages (Pricing, Blog, Sale, Charter Booking, etc.) exist only in the footer — invisible to first-time visitors. A streamlined 6-item nav (Home, Services ▼, Tours ▼, Fleet, About ▼, **Book Now**) with well-organized dropdowns would solve this.
4. **Fix /charter-1 immediately.** It has live, unedited Wix placeholder text: *"This is a space to welcome visitors to the site. Grab their attention..."* — that needs to be removed before anything else.

Structural Issues

Page-by-page summary

What each page contains and its structural role.

/ (Home)	Brand intro, promotions, service overview, airport pricing grid, tour highlights, why ZEN GO, contact shortcuts. Good
/services	All 4 service types + Tokyo/Kyoto/Osaka/Shonan sample itineraries. One very long page — needs splitting. Issue
/about	Brand philosophy (3 pillars), supported languages, service list, driver qualities, car type preview, EV roadmap. Overlaps heavily with /profile. Overlap
/profile	CEO greeting, company vision, registered addresses, representative director, business license, invoice registration number. Good content — just misnamed.
/carlineup	10 vehicles shown — but Toyota Haice and luxury sedans appear twice each. Amenities list at bottom. Duplicate
/airporttransfer	Full booking form: direction, airport, address, date/time, vehicle selection, extras, review & pay. Strong UX. Good
/charter-1	Tour catalog — 30+ tours filterable by region (Kanto/Kansai) and theme. Includes unedited Wix placeholder. Placeholder text
/contact	3 customer categories, WhatsApp/Facebook/WeChat/Live chat channels, hidden email links. Lean but functional. Improve
/termsofservice	10 articles covering bookings, payments, cancellations, liability, data. Well-written. Footer-only access. Visibility
/policy	Safety & carriage conditions (Japanese transport law). Footer-only access. Visibility
/transactionact	Japanese-language only. Required legal disclosure. Footer-only access. No English

Navigation Issues

Issues found	Page-by-page	Nav structure	Proposed layout
--------------	--------------	---------------	-----------------

Navigation comparison

CURRENT NAV	PROBLEMS
MAIN - Home - Services - About us - Company Profile - Car Lineup	7 items only in footer — hidden from users
BOOKING (DROPDOWN) - Airport transfer - Chartered Tour - Customized Trip	2 "About" pages confuse the hierarchy
FOOTER ONLY - Inquiries - Sale - Blog - Pricing - Terms of Service - Safety & Compliance - Transaction Act - Tool - Charter Booking	No "Book Now" CTA in the primary nav Services ≠ Booking split is not intuitive Sale/Promotions buried despite being time-sensitive Inquiries shown in header — this is correct

Further Findings

After reading all main pages, here are the structural, content, and UX issues grouped by severity.

Critical

All 4 service types live on one long /services page

Airport Transfer, Sightseeing, Point-to-Point, and Custom Tours are stacked vertically on a single scroll — no anchors, no separate pages. Users can't link directly to a service or bookmark it.

/about and /profile contain near-duplicate content

Both pages carry the company vision, crew info, and car lineup previews. The "About" page should be brand/values; "Company Profile" should be legal/registration info — currently they overlap significantly.

Top navigation label mismatch

The nav shows "Services" linking to /services, but the booking flows are hidden under a "Booking" dropdown with no top-level label. First-time visitors won't understand the difference between Services and Booking.

/charter-1 contains default Wix placeholder text

"This is a space to welcome visitors to the site. Grab their attention with copy that clearly states what the site is about..." — unedited template copy is live on the Charter page.

Significant

Car Lineup (/carlineup) lists vehicles twice

The same Toyota Haice and luxury Mercedes/Lexus models appear in two separate sections ("For Medium to Large Groups" and "Designate luxury vehicle") with identical images and specs.

Three separate legal pages buried in footer only

Terms of Service, Safety & Compliance Policy, and Specified Commercial Transaction Act are important trust signals but are only accessible via a tiny footer. The Transaction Act page is in Japanese only.

Contact page has no email addresses shown

The /contact page shows three "Inquire via email" buttons but the email addresses are hidden behind clicks. WhatsApp number is shown but no direct phone or email in plain text.

Sale/Promotions buried and inconsistently linked

Current promotions (sign-up coupon, eSIM giveaway, bundle discount) appear on the homepage but /sale is a standalone page only linked from a small "Sale" label in the header — not visible in main nav.

Minor / Polish

Page title tags all say "Go Ride" instead of "ZEN GO"

Every page's browser tab and SEO title reads "Go Ride | [Page]" — inconsistent with the brand name "ZEN GO" used throughout the site content.

Footer nav lists items not in main nav (tool, Pricing, Blog)

Pages like /tool, /pricing, /blog, /charterbooking appear only in the footer sitemap — effectively hidden. If they exist, they need a home in the main navigation.

Repeated text animations on headings

Headings like "What We Offer / What We Offer / What We Offer" appear three times in the HTML — this is a Wix animation artifact that reads poorly in plain text and may affect SEO.

May 8, 2026

- Optimize Images: Aim for a total page weight under 1.5 MB, with individual images kept between 100–200 KB. Use WebP format where possible for better compression.

If your page size exceeds 2 MB, especially on mobile, expect slower interaction times, weaker Core Web Vitals and reduced organic visibility.

Common mistakes to avoid:

- Hiding important pages under deep submenus.
- Generic or vague hero titles.
- Confusing button text.
- Multiple CTAs competing for attention.
